CHEMWATCH

CHECKMATE 'N3

Your Complete Product Compliance Solution

Checkmate 'N3 is Chemwatch's complete product compliance solution, making sure your products can go to market without the risk of a costly product recall.

Our powerful AI engine extracts data from supplier-submitted documents, which is then checked against GHS classifications suggested by Chemwatch's proprietary rules engine.

Both chemicals and articles can be registered in Checkmate 'N3, and data can be extracted from either a chemical SDS or article TDS. Suppliers are encouraged to identify product uses and to provide product labels and additional safety and certification documents.

AI and human audit processes check for compliance in all aspects, seeking any inconsistencies with regulations and policies found in our database of over 7000 regulatory lists, flagging any chemicals with a high level of regulatory burden.

The entire product assessment process is confidential and secure, with information provided by suppliers only visible to chosen parties when necessary. All mandatory reports to relevant authorities are fully supported, including the EU Poisons Centres and the Chinese National Registration Centre for Chemicals.

In addition to pre-market checks, Chemwatch offers the following services:

- Multilingual 24/7 Emergency Response
- Low-cost GHS compliant SDS authoring in 49 languages
- Expert review of product labels
- Cradle-to-grave product tracking, using our unique barcode support solution, SmartAaaS
- Supplier ESG rating calculator
- Sustainability passport support

From start to finish, Checkmate 'N3 ensures your products' compliance in just three simple steps.
