

Smart AaaS

Chemwatch's new Smart Audit tool

Included with

Smart Audit as a Service (AaaS) lets you build complete asset inventory lists, chemical manifests, or bills of materials with minimal effort or inefficient data input, and audit your chemical and article inventories with ease. This is achieved using our SmarterSuite mobile application to scan any vendor barcode, found on the product label. No need for proprietary barcodes!

We use refined AI-assisted automation tools and a repository of over one billion vendor barcodes to return all key audit data. Products with unknown barcodes can also be registered to our database in minutes.

Compliance Solutions

Audit data assists with compliance for:

- Article waste
- Supply chain management
- Life-cycle assessment
- Regulatory restrictions such as SCIP, ROHS, WEEE, and more

Chemicals Management

The Smart AaaS mobile application can return all relevant chemical inventory information, including:

- Product name
- Vendor
- Country of origin
- Container volume or weight
- Site location
- Links to SDS and additional documents (risk assessment, container labels, etc.)

Articles Management

Data points associated with any engineered article or parts may include:

- Part number—including product or catalogue codes, and SKUs
- Engineering parameters
- Unit pricing
- Potential substitutes
- Regulatory restrictions for hazardous chemicals within an article
